FITT RESOURCES

pump refurbishment

With our highly skilled team and well equipped facilities, Fitt Resources offers quality refurbishment for pumps of almost any size and type. With every pump overhaul, we investigate potential design and material upgrades to improve efficiencies and increase asset life and reliability.

We use the following processes to improve your assets:

- meticulous strip survey to investigate root cause of failure – including photographs, analysis & recommendations
- quality reporting
- a range of industrial coatings including Chesterton ARC coatings
- pump performance testing
- power and water reduction upgrades
- non destructive testing to certify component quality
- upgrade of material specifications to increase asset life
- blasting facility for surface preparation
- full machine shop facility
- pressure testing

industry specialists in all aspects of pump refurbishment, delivering quality solutions, on time

New wear rings and bearing bushes were manufactured and fitted to this two stage condensate extraction pump.

Line boring a split case pump.

Complete refurbishment of fire pump and install Chesterton 442 mechanical seals and spiral trac.

Worthington pump coated internally to improve efficiency: gland packing replaced with Chesterton S10 mechanical seals and white metal bearing refurbishment.

pump refurbishment industries

- pulp & paper
- mining & mineral processing
- water & waste water
- oil & gas
- power generation
- defence industries
- general industry

FITT RESOURCES

"Our goal is to become the respected supplier partner to industry, by offering consistent quality, innovation and reliability across a growing range of products and services."

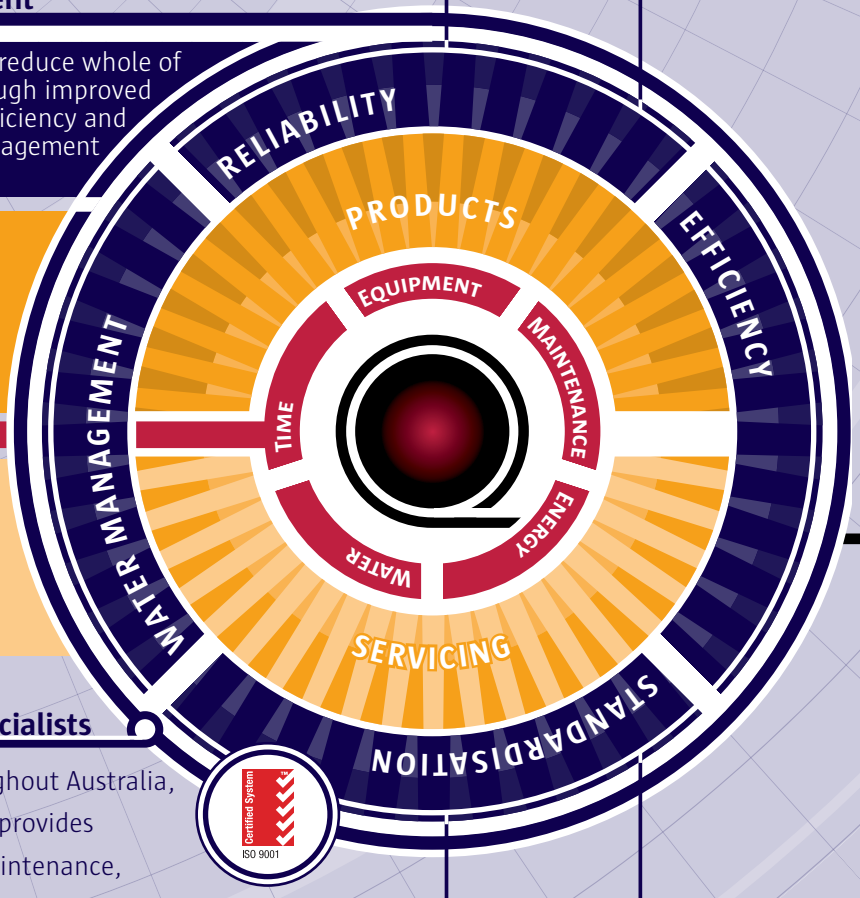
the Fitt benefit

Our goal is to reduce whole of life costs through improved equipment efficiency and enhanced management systems.

products
trusted brand names at the best price within the right time

costs

servicing
repair, upgrade, fabricate, monitor, test and solve



efficiency
improve pump efficiency and reduce energy consumption

reliability
improve equipment longevity, efficiency and 'availability' using a systems review approach

standardisation
manage and reduce inventory with site-wide solutions

water management
water reduction products & programs to lower operational costs

industry specialists

Located throughout Australia, Fitt Resources provides equipment maintenance, process support and asset management to a range of industrial customers.

Our reputation is built on being reactive to customer needs to deliver engineered solutions that improve whole of life costs and operation for core equipment.
